CONTENTS

Foreword ix
Acknowledgments xi
Prologue xiii
Introduction 1
1. Aerostats Open the Vista 3
2. Creating Rocket Science 21
3. Maturing the Technology 41
4. Space Medicine on the Threshold 56
5. Rocket-Powered Aircraft 83
6. Cold War Enablers 105
7. The Race into Space 115
8. Developing a Manned Spacecraft 136
9. The First Orbital Flights 168
10. Exploring the Unknown 210
11. Commitment to the Moon 225
12. Rendezvous Is the Key 233
13. Conceiving a Moon Rocket 251
14. Gemini Captures the Lead 276
15. Project Apollo 317
16. Death Stalks the Astronauts 334
17. The Circumlunar Goal 350
18. One Small Step 383
19. Exploring the Moon 414
20. The First Space Stations 448
21. Designing a Reusable Spacecraft 482

proof

22. Engineering the Space Shuttle 498
23. The Reality of Failure 521
24. Mir: A Durable Space Station 542
25. A Permanent Presence in Space 558
26. Unfulfilled Soviet Efforts 573
27. Return of the Expendable Rocket 581
28. The Next Generation of Manned Spacecraft 588
Epilogue: What Will the Future Bring? 603
List of Acronyms and Abbreviations 607
